In MIG 7 Series v1.1, the bank selection page does not prevent the combination of High Range (HR) and High Performance (HP) banks in a memory interface. This means an interface could be generated where Data and Address/Control are located in both HR and HP banks. This combination would result in different I/O standards on the same memory interface bus.

Browsing through DS187, there seem to be very few distinctions between HR and HP IOs, other than voltage range (and SelectIO choices). The most notable distinctions seem to be IODELAY jitter performance. Am I missing something? At 1.8V signaling, are there other performance differences between H...

Rated 5 out of 5 by Ripit from A Cable is a Cable With a lot of Pro photographers turning to tethered shooting (direct to a computer) there remains the problem of when a laptop is not available or convenient, what does one do? Rely on the 3 inch display? No. Cameras come with a video cable, known as "the one with the yellow end that is still in the box".

1 Answer Other - Society & Culture1 decade ago. Why are baseboard heaters so unreliable? I moved to this apartment building in Canada where it is heated by two baseboard heaters, one below the balcony in the living room, and another one below the window in the bedroom. We have the temperature set at 20°C (68°F) and it should be able to stay ...
