ASCE Manual 74 uses a curve developed by Durst (Durst, 1960) to estimate GF's. CENELEC uses the following equation for the Gust Factor at height z to relate the peak gust $V_g[z]$ to the 10-min average for Open Country: $GF[z] = 1 + 2.28 / \log[z/0.05]$ Eq. 6

ASCE 74 is the loading guide for our industry (it is currently in revision) and has the drag factors you will use. It may also be in ASCE 48 which is the pole standard. You generally use 1.0 for CD for round poles or shapes and 1.6 for most AISC rolled shapes like angles. I seem to remember using 2.0 for flat plates with sharp edges.
