Beeswax: Production, Harvesting, Processing and Products ...

Processing Beeswax for Beginners. Processing beeswax is as natural as following just a few simple steps. When harvesting honey, the first step involves removing the wax caps from the frames to allow access to the honey. When processing beeswax, the wax caps first drop into a straining system, and the honey separates (somewhat) from the wax caps. Burr Comb complete with honey on harvest day.

Processing Beeswax for Beginning Beekeepers and Artists

When you extract honey from hives, the cappings that you slice off represent your major wax harvest for the year. You'll probably get 1 or 2 pounds of wax for every 100 pounds of honey that you harvest. If you have a Top Bar hive and are using a honey press, you will have an even greater bounty of beeswax.

How to Harvest Beeswax - dummies

Producing beeswax is an expensive process for the bees. Bees must consume a lot of honey to promote wax gland production. This is why wax is a valuable by-product of a hive. Honeycomb Cells are Storage Vaults

Cleaning Beeswax the Easy Way - Carolina Honeybees

Beeswax is a natural wax produced by honey bees of the genus *Apis*. The wax is formed into scales by eight wax-producing glands in the abdominal segments of worker bees, which discard it in or at the hive. The hive workers collect and use it to form cells for honey storage and larval and pupal
