north $x_2 = 15$ cm west
Solution $x_{tot} = x_1 + x_2 = (3.0 \times 10^{-1} \text{ cm}) + (15 \text{ cm}) = 15 \text{ cm}$
 $y_{tot} = y_2 = 25 \text{ cm}$
 $d^2 = (x_{tot})^2 + (y_{tot})^2 = (15 \text{ cm})^2 + (25 \text{ cm})^2 = 29 \text{ cm}^2$
 $d = 5.4 \text{ cm}$
Solution $x_1 = 2.00 \times 10^2$ units
 $y_1 = 0$
 $x_2 = d \cos \theta = (4.00 \times 10^2 \text{ units})(\cos 30.0^\circ) =$

Dimensional

...
Motion along a curved path on a flat surface or a plane (such as that of a ball on a pool table or a skater on an ice rink) is two-dimensional, and thus described by two-dimensional kinematics. Motion not confined to a plane, such as a car following a winding mountain road, is described by three-dimensional kinematics.

Vectors and Two- Dimensional Motion

Vectors and Two-
Dimensional Motion In our discussion of one-dimensional motion in Chapter 2, we used the concept of vectors only to a limited extent. In our further study of motion, manipulating vector quantities will become increasingly important, so much of this chapter is devoted to vector techniques.
