Chemicals Controlling Insect Behavior Yanwoore

Genetic analyses of insect behavior require careful control of environmental conditions, because even subtle differences in test conditions can influence results of assays (Vanin et al., 2012). Objective measures of insect behavior are difficult, and considerable efforts have been devoted to devising specific and appropriate assays.

Insect Behavior - an overview | ScienceDirect Topics

They include such chemicals as hydrogen cyanide, naphthalene, nicotine, and methyl bromide and are used mainly for killing insect pests of stored products or for fumigating nursery stock. Synthetic insecticides. The synthetic contact insecticides are now the primary agents of insect control.

insecticide | Description, Modes of Action, Types ...

Repellents make a location (like your yard or skin) less attractive to mosquitoes, but don't kill them. So, citronella, DEET, smoke, lemon eucalyptus, lavender, and tea tree oil might keep the insects at bay, but won't control them or get rid of them in the long run. Repellents vary in effectiveness, too.
