New Packaging Technologies That Promote Sustainability and Food Safety. From carrying food in from the field, to shipping processed products, to assembling a supermarket display, packaging matters. So, as a follow-up to our exploration of emerging trends in food packaging, we're taking a look at several innovative technologies that could change the future of packaging.

New Packaging Technologies That Promote Sustainability and ...

Inventive Ways to Promote New Items. People are accustomed to seeing cardboard displays, menu board additions, tray liners and other promotional items meant to let hungry people know about the latest offerings. But, technology has substantially increased the options available to restaurant brands. For example, TV screens built into mirrors made from smart glass combine advertising with luxury.

Emerging Technologies Taking Over the Food and Drink ...

They could change the shape of demand for food, through alternative proteins and personalized nutrition, for example; promote linkages along the food value chain, through mobile service delivery, big data, the Internet of Things (IoT) and blockchain-enabled traceability; and create effective production systems, through water sensors, gene-editing and other scientific advances that make agriculture more precise and high-yielding.

How technology can make our food system more sustainable

The biotechnology used to create genetically modified organisms (GMO) is critical in food

technology, and also notorious. A GMO is something that has been genetically engineered to have certain...

10 ways technology is changing our food - TechRepublic

Although sometimes we do not realize it, technology impacts our every move even swaying our food choices. Here are five ways technology influences the food you eat: GMOs. While this may seem like a new technology, GMOs have actually been around for many years. The first genetically modified organism was made in 1994. Additionally, products from GMOs have been in stores since 1997.

5 Ways New Technologies Are Affecting The Food Industry ...

We've invented an ultrasound-based drying technology that uses sound waves, low temperatures and reduced drying times to dry food products far more gently with less energy. It's still at the research stage and not yet used commercially, but the results are showing promise for better product quality such as retention of antioxidants, vitamin C and other nutritional components.

Our top six new innovative food technologies - CSIROscope

Feb. 28, 2014. From ordering and inventory to information access and storage, technology is helping foodservice departments run more efficiently, but not without some growing pains and a commitment to learning. Ninety-two percent of school operators strongly agree that technology has had a positive impact on their foodservice departments, and 78% of schools strongly agree that technology has even made employees' jobs easier.

The impact of technology on foodservice

CDER's Office of Pharmaceutical Quality created the Emerging Technology Program to promote the adoption of innovative approaches to pharmaceutical product design and manufacturing.
