In a broad view, chemistry can be classified as a branch of physical science that explains the origin, structure and behaviour of matter and the change of matter from one form to another. Inorganic and Organic Chemistry are two different branches of chemistry that depend on the nature of compounds. The main difference between organic and inorganic chemistry is that inorganic chemistry is the study of inorganic compounds, whereas organic chemistry is the study of organic compounds.

Organic compounds and inorganic compounds form the basis of chemistry. The primary difference between organic vs. inorganic compounds is that organic compounds always contain carbon while most inorganic compounds do not contain carbon. Also, nearly all organic compounds contain carbon-hydrogen or C-H bonds.

Understand the Difference Between Organic and Inorganic

The scope and boundaries of inorganic chemistry were shaped by the earlier field of organic chemistry in the mid-eighteenth and later centuries. Back in these earlier days of chemistry, all chemicals not classified as organic, in other words all chemicals, including minerals and alloys, that do not have an origin in living organisms, were placed in a very large category of "inorganic"
