Write a program to find a zero of a function f in the following way: In each step, an interval $[a, b]$ is given and $f(a)f(b) < 0$. Then c is computed as the root of the linear function that agrees with f at a and b . We retain either $[a, c]$ or $[c, b]$, depending on whether $f(a)f(c) < 0$ or $f(c)f(b) < 0$. Test your program on several functions.
