server for the local network, so that other computers, acting as clients, can boot from the server, access the Knoppix medium remotely, and run programs locally. For this task, Start KNOPPIX Terminal Server in the Knoppix menu. Setup is easy and straightforward; you basically just confirm the allowed network range and boot options for the clients.

Getting Started with Knoppix 7.3 » Linux Magazine

KNOPPIX is an operating system based on Debian designed to be run directly from a CD / DVD or a USB flash drive, one of the first of its kind for any operating system. Knoppix was developed by, and named after, Linux consultant Klaus Knopper. When starting a program, it is loaded from the removable medium and decompressed into a RAM drive. The decompression is transparent and on-the-fly. Although KNOPPIX is primarily designed to be used as a Live CD, it can also be installed on a hard disk like
