A major interval is one semitone larger than a minor interval. The words perfect, diminished, and augmented are also used to describe the quality of an interval. Only the intervals of a second, third, sixth, and seventh (and the compound intervals based on them) may be major or minor (or, rarely, diminished or augmented).

Major and minor - Wikipedia

The logic is the same as we saw for the denominations “major” and “minor“. The denomination “augmented” indicates a longer interval and “diminished” indicates a shorter interval. “Perfect” is in the middle between these two. But couldn’t we just use the names “major” and “minor” for all the notes instead of using “diminished”, “augmented” and “perfect”? Yes, we could. So why are there other denominations? In the more advanced topics you will ...
