## **Parasitic Helminths And Zoonoses In**

Zoonotic infections are among the most common on earth and are responsible for >60 per cent of all human infectious diseases. Some of the most important and well-known human zoonoses are caused by worm or helminth parasites, including species of nematodes (trichinellosis), cestodes (cysticercosis, echinococcosis) and trematodes (schistosomiasis).

## **Zoonotic Parasitic Diseases: Emerging issues and Problems**

Parasitic worms, also known as helminths, are large macroparasites; adults can generally be seen with the naked eye. Many are intestinal worms that are soil-transmitted and infect the gastrointestinal tract. Other parasitic worms such as schistosomes reside in blood vessels.. Some parasitic worms, including leeches and monogeneans, are ectoparasites - thus, they are not classified as helminths ...

Helminths either live as parasites, or free of a host, in aquatic and terrestrial environments. There are several types; the most common worldwide are intestinal nematodes or soil-transmitted helminths (STH), schistosomes (parasites of schistosomiasis) and filarial worms, which cause lymphatic filariasis (LF) and onchocerciasis.
