Analyzewishy the SI unit of acceleration is  $\text{m/s}^2$ . Acceleration is final velocity minus initial velocity, divided by time. The difference of two velocities, with SI units  $\text{m/s}$ , also must have units  $\text{m/s}$ . If this difference is divided by time, with SI unit  $\text{s}$ , the result has the units  $\text{m/s/s}$ , or  $\text{m/s}^2$ .
