Test Sieve Certification and Calibration - W.S. Tyler

sieve designation sieve opening nominal wire diameter (b) These sieves are not in the fourth root of 2 Series, but they have been included because they are common usage (c) These numbers (3 1/2 to 400) are the approximate number of openings per linear inch but it is preferred that the sieve be identified by the standard

W. S. TYLER ASTM Sieve Chart and TYLER Equivalents

As stated in the video above, a test sieve certification is a statement or verification that a sieve meets or exceeds written standards. It is an assurance that a sieve was manufactured to (and performs to) a certain level of performance. To certify a test sieve, the sieve is first examined visually to look for tears, wavy mesh or cracked epoxy.

RO-TAP Sieve Shaker - Particle Analysis Equipment | W.S. Tyler

For over 140 years, W.S. Tyler ® has been a leader in the design, engineering, and manufacturing of woven wire cloth and mesh materials. You may have heard about our quality products, our innovative approach or our award-winning customer service. But you'll likely remember us for our relentless passion for precise engineering.

Leading Manufacturer of Woven Wire Mesh Materials | W.S. Tyler

This was the foundation for the development of ASTM E-11 used in particle analysis today and would become a staple of W.S. Tyler's reputation. The principle of this sieve series became so essential, that it was adopted as a national standard by the United States and many foreign countries. Certain sieves were proposed as the basis for an international sieve standard. To meet the need for faster, more reliable means of testing, Tyler developed the Ro-Tap Sieve Shaker in 1914.

W.S Tyler Blog | Test Sieves

The W. S. Tyler®, Ultrasonic Test Sieve Cleaner is specially designed to provide a safe and effective means for cleaning test sieves. The compact and portable standard unit operates on 110 volt, 60 cycle current. The unit requires little, if any, maintenance. The cleaner produces ultrasonic vibrations in a cleaning fluid bath, which cause contaminants to become dislodged from both the sieve frame and media.
